RESEARCH FOR A MORE CONSCIOUS TOMORROW

FOUNDER
SVEN KAUFMANN

“To explore the unknown, we must be willing to ask different questions.”

“Expanding the horizons of what we can ask, may transform what we can know.”

WHAT QUESTIONS HAVE WE NOT EVEN THOUGHT OF YET?

Can extreme states of consciousness help us discover them?

WHY?

Consciousness remains a fundamental unresolved question in science. While psychedelic research has focused largely on therapeutic outcomes and neural correlates, the phenomenology of extreme non-ordinary states remains largely unexplored.

OUR APPROACH

The Apeiron & Nous Foundation combines first-person phenomenology, physiological measurements, and AI-assisted analysis to systematically investigate extreme states of consciousness.

OUR VISION

To systematically map extreme conscious experiences, identify recurring patterns, and generate testable hypotheses that expand our scientific understanding of consciousness.

KEY FINDINGS / HIGHLIGHTS

1. EXTREME CONSCIOUSNESS AS DATA

Systematically documenting profound non-ordinary experiences.

2. SEARCHING FOR RECURRING STRUCTURES

Identifying common patterns across sessions and individuals.

3. AI AS A DISCOVERY TOOL

Using AI to uncover patterns and correlations in complex phenomenological data.

4. NO PREDEFINED INTERPRETATION

Generating hypotheses without assuming a specific explanatory model.

5. EXPLORING UNKNOWN QUESTIONS

Discovering phenomena and scientific questions we may not yet recognize.

THE RESEARCH PROCESS FROM EXPERIENCE TO INSIGHTS

1. EXTREME CONSCIOUSNESS AS DATA

Systematically documenting profound non-ordinary experiences.

2. SEARCHING FOR RECURRING STRUCTURES

Identifying common patterns across sessions and individuals.

3. AI AS A DISCOVERY TOOL

Using AI to uncover patterns and correlations in complex phenomenological data.

4. NO PREDEFINED INTERPRETATION

Generating hypotheses without assuming a specific explanatory model.

5. EXPLORING UNKNOWN QUESTIONS

Discovering phenomena and scientific questions we may not yet recognize.

7. VALIDATION & COMPARISON

Across individuals & sessions
Look for consistencies
Explore alternative explanations

8. ITERATE & EXPAND

Refine methods
New Questions
Deeper exploration

A MORE CONSCIOUS TOMORROW

By bridging human experience and artificial intelligence, we aim to expand our understanding of consciousness and contribute to a more compassionate, informed and connected world.

INTERDISCIPLINARY COLLABORATION

We invite collaboration across psychedelic science, neuroscience, phenomenology, psychology, philosophy, and AI to advance this long-term interdisciplinary research initiative.
